APPENDIX E: DEFINITIONS20

1. Introduction

The Nevada Department of Motor Vehicles (DMV) is rebuilding the agency's IT infrastructure as part of a multi-year DMV transformation effort. As part of this effort, the DMV will be replacing the current insurance reporting system with a new electronic insurance verification system termed the Nevada Insurance Verification System (NevadaIVS). NevadaIVS will provide DMV the ability to continue to perform real-time insurance verification and significantly improve the uninsured identification and compliance process. NevadaIVS will be implemented by MV Solutions Inc. and will utilize the Insurance Industry Committee on Motor Vehicle Administration (IICMVA) standards for insurance company reporting.

NevadaIVS insurance company reporting requirements are summarized below:

- **Web services:** Insurance companies insuring more than five hundred (500) vehicles in Nevada shall make their insurance verification web service available to NevadaIVS.
 - The web services should follow the specifications and standards of the IICMVA.
 - Insurance companies are required to make private passenger and commercial policies available through this web service.
 - While commercial policies are required, insurance companies are not required to make commercial non-vehicle specific policies (generally referred to as "all owned" or "blanket policies") available through this web service.

- **Book of Business:** Insurance companies insuring vehicles in Nevada shall provide their Book of Business (BOB) data to NevadaIVS on a weekly basis.
 - The BOB files should include private passenger and commercial policies with liability coverage.
 - Commercial policies (except for Motor Carrier policies) are required to be reported. The Vehicle Identification Numbers (VINs) are not required for non-vehicle specific policies unless available for reporting.
 - Insurance companies submitting BOB data to NevadaIVS must use the secure file transfer protocol (SFTP) process outlined in this Guide. Insurance companies insuring five hundred (500) or fewer vehicles in Nevada can either SFTP the BOB file or utilize the NevadaIVS website for BOB reporting.

Key dates for insurance companies are listed below:

- **January 31st, 2024** – NevadaIVS is available to insurance companies for registration, testing, and production integration.
- **February 29th, 2024** – Deadline for insurance companies to register on the NevadaIVS website (www.NevadaIVS.com).
- **May 15th 2024** – Deadline for insurance companies to begin testing. Insurance companies must submit a test BOB file to NevadaIVS and begin web services testing.
- **July 31st, 2024** – Deadline for insurance companies to move to production with NevadaIVS, making their production web services available (if applicable) and begin BOB data submissions.

NV LIVE's current insurance verification system will be discontinued when the DMV IT infrastructure transformation is completed. Until then, insurers should also continue their current reporting to NV LIVE's current system. DMV will issue communication informing insurers when the system is discontinued.

This Guide and any future updates will be posted on the NevadaIVS website. Go to www.NevadaIVS.com, click on the HELP link, and then on Help For Insurance Companies.

Insurance companies are responsible for reading and complying with this Guide and reviewing additional information posted on the NevadaIVS website. If you have any questions, please contact the NevadaIVS help desk at support@NevadaIVS.com.

2. Insurance Company Web Services

Insurance company web services must be capable of verifying the existence of mandatory liability insurance for vehicles registered/rated in Nevada.

2.1 Web Service Structure

The NevadaIVS Online Verification client is based upon the model developed by the IICMVA that allows a jurisdiction to use web services hosted by insurance companies to verify insurance. This section describes the overall structure of the web services to be hosted by the insurance companies.

Web Services Description Language (WSDL) File

A WSDL file is an XML file that describes the public interface to a web service. The IICMVA has created WSDL files for Java, .Net, and Universal web service implementations. To make the verification process as fast as possible, NevadaIVS uses these WSDL files and does not attempt to read the WSDL file for each web service every time a verification request is initiated. NevadaIVS manages the endpoints, which are Uniform Resource Locators (URLs), from a local configuration file.

Insurance companies are required to use one of the WSDLs published by the IICMVA. These WSDLs can be found at <http://www.iicmva.com/IICMVAPublications.html>.

Schema

An XML schema describes the structure of an XML message. NevadaIVS currently supports the ANSI ASC X12 Insurance Committee's XML Schema for Online Insurance Verification. Case is not specified in the schema. If an insurance company has particular requirements for upper or lower case, the message payload must be converted to the required case. Also, the policy number must be converted to the required format.

Extensible Markup Language (XML) Messages

The XML messages for the insurance verification request and response are derived from the schema. Appendix A contains a sample verification request message and a sample verification response message.

Simple Object Access Protocol (SOAP)

SOAP is an XML based protocol that is used by web services to wrap around the XML messages making them platform and language independent. SOAP 1.1 is required.

Hypertext Transfer Protocol (HTTP) over Transmission Control Protocol/Internet Protocol (TCP/IP)

The XML messages will be transported over the internet via HTTP. Verification requests will utilize HTTP 1.1 and it is strongly suggested that it be used for the verification responses as well.

Security

The XML messages will be encrypted via the Secure Sockets Layer/Transport Layer Security (SSL/TLS). NevadaIVS will maintain Class 3 X.509 certificates identifying both the test and production environments. The certificate will be presented in each connection handshake so that the insurance company can authenticate the client.

2.2 Expected Level of Service

- Insurance companies' web services are required to respond to verification requests on a 24/7/365 basis. Although a reasonable amount of downtime to maintain and upgrade systems may occur, the web service availability, measured on a monthly basis, shall be at least 99%.
- Scheduled downtime must be reported via e-mail to support@NevadaIVS.com as early as possible, describing the reason for the downtime, the time the web service will become unavailable, and the time it is expected to become available again.
- Unscheduled downtime must be reported via e-mail to support@NevadaIVS.com immediately, describing the reason for the downtime, the time the web service became unavailable, and the estimated time it will become available again.
- Insurance companies should design their web services to provide a response within 2 seconds of receipt of an inquiry. Contributing factors to slow responses outside the control of the insurance companies, such as Internet response time, will be taken into account. Responses not received in a timely manner will be logged and used for evaluating the insurance company's web services performance.
- Accuracy is critical to the success of the program. Therefore, each insurance company's web service must provide the correct response to an inquiry. Each web service will be monitored and tested for accurate responses, including testing for false confirmations.

2.3 The Verification Request and Response

NevadaIVS supports the current and previous versions of the IICMVA specifications and plans to include future versions as they are issued. Prior to implementation of a schema, a WSDL created from the schema must be tested and approved.

2.3.1 The Verification Request

The verification request is sent to the appropriate insurance company by NevadaIVS in the XML message format that is valid for the schema employed by the insurance company's web service. Verification that the request is from an authorized entity can be established from the certificate that NevadaIVS will present when the connection is initiated.

The following data elements will be in the verification request message:

- Tracking/Reference Number (ties the request to the response)
- National Association of Insurance Commissioners (NAIC) Code (identifies insurance company)
- Vehicle Identification Number (VIN)
- Policy Number ("UNKNOWN" will be provided, if not available)
- Verification Date

The Verification Date may be the current date or a date in the past. Insurance companies are required to verify insurance for dates up to 380 days in the past.

2.3.2 The Verification Response

For each verification request sent by NevadaIVS, a verification response should be issued by the insurance company's web service. Because of front end edits, NevadaIVS will not send inquiries that would result in a response from the insurance company that the request was invalid.

If minimum Nevada motor vehicle liability coverage is present and active on the requested verification date, the insurance company should respond with the following coverage confirmation result: CONFIRMED.

If minimum Nevada motor vehicle liability coverage is not present or is not active on the requested verification date, the insurance company should respond with the following coverage confirmation result: UNCONFIRMED.

The required data elements in a verification response are:

- ResponseCode
- NAIC: This is the NAIC of the insurance company insuring the vehicle.

We also recommend including the following data elements. However, these data elements are not mandatory.

- UnconfirmedReasonCode
- TrackingNumber (return the number received in the verification request)
- VerificationDate
- UniqueKey (policy number)
- PolicyState

2.4 Web Service Testing

Before testing begins, each insurance company will have to register on the NevadaIVS website as described in Section 6. After registration is complete, the insurance company will be contacted by the NevadaIVS team to schedule a conference call to discuss the testing process and address any questions about the NevadaIVS requirements. The following information will be collected during the call:

- NAIC codes that will be supported by the web service.
- The web service URL(s).
- The IICMVA WSDL that is used by the web service.
- A time frame during which insurance companies would like to conduct the testing.

Following the call, the insurance company will be sent the following:

- The SSL certificates that identify the NevadaIVS web service Client.

- The IP addresses that identify the source of the verification requests.

The testing will consist of the following steps:

Basic connectivity test

- Connectivity between endpoints to ensure that endpoints are reachable.

Test ability to send and receive messages

- Test verification requests and responses formatted in XML and wrapped in SOAP are exchanged.

Testing with security

- The SSL encryption and authentication via the X.509 certificates will be enabled. Testing will be done to ensure that the functionality is not impacted for insurance companies who have configured the NevadaIVS SSL certificate in their web service. For companies who choose to install the certificate from the jurisdiction, they must install the public key from the NevadaIVS SSL certificate and the root certificate from the issuing certificate authority.

Test Cases and Data

NevadaIVS will run the insurance company's web service through a set of test cases. If required, the insurance company will provide the data necessary for these test cases.

- After all the above testing has been completed, the insurance company can make their production web service available to NevadaIVS for insurance verification.

2.5 VIN Broadcasting

If the VIN in the verification request message matches an insured vehicle but the policy number in the request does not match the insurance policy number, then the insurance company's web service should be able to indicate that the vehicle is covered (this is known as "VIN Broadcasting" or "Unknown Carrier Request"). The insurance company can indicate that the vehicle is covered in one of the following ways:

- Returning a value of "UNCONFIRMED" in the ResponseCode field and a value of "10" or "VIN3" in the UnconfirmedReasonCode field of the CoverageResponse document.
- Returning a value of "CONFIRMED" in the ResponseCode field of the CoverageResponse document.

It is recommended that insurance company web services support VIN broadcasting.

3. File Exchange and Testing

3.1 FTP Accounts and PGP Encryption

Insurance companies must send text files to NevadaIVS using Secure File Transfer Protocol (SFTP – FTP over SSH). Secure FTP accounts will be created for each insurance company after registering with NevadaIVS. If the insurance company prefers, the same FTP account can be shared by companies with different NAIC numbers that are under the same insurance group. Login information and the IP addresses of the FTP servers will be provided after registration.

Each FTP account will have the following folders:

- BOB_Inbound
- BOB_Outbound

All files exchanged between NevadaIVS and insurance companies will also be encrypted by the Pretty Good Privacy (PGP) digital data encryption program. Public PGP keys will be exchanged with the NevadaIVS Help Desk prior to exchanging insurance data.

3.2 File Testing Process

Before testing begins, each insurance company participating in NevadaIVS must register on the NevadaIVS website as described in Section 6. After completing registration, insurance companies will be contacted by the NevadaIVS team to schedule a conference call to discuss the testing process and address any questions about the NevadaIVS reporting requirements. FTP User IDs and passwords will be provided, and public PGP keys will be exchanged.

The testing process includes the following:

- **Connectivity Testing:** The insurance company should be able to connect to the designated NevadaIVS FTP server, login to the insurance company's FTP account, and transfer files to the appropriate folders. The insurance company should be able to retrieve NevadaIVS return files.
- **Decryption:** NevadaIVS should be able to successfully decrypt files. The insurance company should be able to successfully decrypt NevadaIVS return files.
- **File Format:** The insurance company files should be formatted according to NevadaIVS requirements.
- **File Content:** The insurance company file should contain valid test data and the data elements should meet the NevadaIVS rules. During testing, it is not necessary to provide production data (in-force policies).

The NevadaIVS team will work with insurance companies and provide information to assist in the resolution of any errors.

4. Book of Business File Reporting

BOB data should contain all active motor vehicle liability insurance policies rated for Nevada. The format and method of submitting BOB data is covered in this section.

4.1 BOB Data To Be Reported

The following information should be included in the BOB files:

- All active Nevada motor vehicle insurance policies with the minimum liability coverage required by the State of Nevada and the associated vehicles and customers.
- Policies with only comprehensive coverage are not required to be reported but can be included at the insurer's option. For policies with comprehensive coverage only, the COMPREHENSIVE INDICATOR should be set to "Y".
- Commercial policies (except for Motor Carrier vehicles) are required to be reported. The Vehicle Identification Number (VIN) is not required for non-vehicle specific policies.
- VINs are not required to be reported for non-vehicle specific policies unless available for reporting.
- Vehicle types exempt from reporting are provided in Appendix C.

4.2 BOB File Structure

The BOB file structure is based upon Version 1.2 of the Insurance Data Transfer Guide published by the IICMVA on January 3, 2017. The BOB file is a text file with rows of fixed length. All rows will be 300 characters long with spaces used as filler. Each row must be followed by a carriage return line feed character (Hexadecimal '0D 0A'). A separate file should be submitted for each NAIC number.

File Name

The file name should include the following fields:

- NAIC Number: Insurance company's NAIC Number
- File Creation Date: Date file was created in the YYYYMMDD format
- Environment: "P" – Production; "T" - Test
- Extension: File extension such as "pgp", "asc", "txt" or any other 3 character file extension

File Name format should be in the *NAIC_Date_Environment.extension* format.

For example: 12345_20190815_P.pgp

Detail Rows

The detail rows show the policy data being submitted by the insurance company. One record should be generated per each customer, vehicle, and policy combination. For example, if policy number 12345 is associated with customers Jane and John Doe on a 2004 Jeep and a 2005 GMC, then four records with the following combinations should be created:

- Jane Doe, 2004 Jeep, policy 12345
- Jane Doe, 2005 GMC, policy 12345
- John Doe, 2004 Jeep, policy 12345
- John Doe, 2005 GMC, policy 12345

Each field's length is specified in the table below with any unused length filled by trailing spaces. Any fields for which a value is not being provided should be filled with spaces. Provide the following fields in each row:

NevadaVS Implementation Guide for Insurance Companies - Version 1.0

Field Id	Field Name	Length	Begin	End	Type (AN –Alpha numeric N- Numeric)	Mandatory/Optional	Description
1	POLICY TYPE	2	1	2	AN	M	'VS' = Vehicle Specific 'NS' = Non-Vehicle Specific
2	NAIC	5	3	7	N	M	NAIC Code
3	POLICY NUMBER	30	8	37	AN	M	Policy Number
4	EFFECTIVE DATE	8	38	45	N	M	Effective Date – YYYYMMDD format Date coverage was added for the vehicle. There should not be any time out of force (lapse of coverage) between the Effective Date and the transmission date. If the vehicle had any time out of force, then the effective date that coverage was resumed or reinstated should be reported.
5	VIN	25	46	70	AN	O: for non-vehicle specific policies M: for vehicle specific policies	
6	LAST NAME or ORGANIZATION	40	71	110	AN	M	
7	PREFIX NAME ABBR	3	111	113	AN	O	
8	MIDDLE NAME	20	114	133	AN	O	
9	FIRST NAME	40	134	173	AN	M: if customer is an individual	
10	SUFFIX NAME	3	174	176	AN	O	Abbreviated Name Suffix (JR, SR, etc.)
11	FEIN	9	177	185	AN	M: if customer is an organization and FEIN is available to insurer.	
12	ADDRESS	50	186	235	AN	M	
13	CITY	35	236	270	AN	M	
14	STATE	2	271	272	AN	M	
15	ZIP	5	273	277	N	M	
16	COMMERCIAL INDICATOR	1	278	278	AN	M: for commercial policies	"Y" for commercial policies
17	COMPREHENSIVE INDICATOR	1	279	279	AN	O	"Y" for Comprehensive Coverage Only
18	FILLER	21	280	300	AN	M	Space Filled

Trailer Row

Each file should have one trailer row with the following fields:

Field Name	Length	Begin	End	Type	Mandatory/Optional	Description
TYPE	2	1	2	AN	M	'TR' = Trailer
RECORD COUNT	12	3	14	N	M	Record count not including Trailer Record
PROCESS DATE	8	15	22	N	M	Date the file was created – YYYYMMDD Format
FILLER	278	23	300	AN	M	Space Filled

4.3 BOB File Submission

Each insurance company will be assigned an FTP account (see Section 3.1). There will be two folders under each FTP account for exchanging BOB files. Place all BOB files into the BOB_Inbound folder. All return files created by NevadaIVS in response to the BOB files will be placed in the BOB_Outbound folder.

4.4 BOB Return Files Generated for Insurance Companies

This section describes the types of files that may be generated by NevadaIVS and placed in the BOB_Outbound folder of the insurance company. These files will inform insurance companies if their files were successfully processed or if any errors were encountered in the processing. For each BOB file submitted by the insurance company, at least one of the following files will be generated by NevadaIVS:

1. **OK file:** If there are no errors in the BOB file submitted by the insurance company, an OK file will be generated. The OK file name will be named OK_NAIC_DatetimeStamp.pgp (e.g. OK_12345_20190806121501.pgp).
2. **Decryption Error File:** This file will be generated if a PGP decryption error occurs. Decryption errors can happen for the following reasons:
 - a. File sent by insurance company was not encrypted.
 - b. File sent by insurance company was improperly encrypted.
 - c. File sent by insurance company was encrypted using the wrong PGP key.

Decryption error file will be identified based on the file name prefix DE. The file will be named DE_NAIC_DatetimeStamp.pgp (e.g. DE_12345_20190806121501.pgp).

3. **Reject File:** This file will be generated if NevadaIVS cannot read the file or if the file is improperly formatted and the whole file is being rejected. The file may be rejected for the following reasons:
 - a. File is not formatted properly.
 - b. Trailer has a non-zero record count but detail records of the file are missing.
 - c. Length of each record (row) is not up to the length specified in this guide.
 - d. End of a record (row) missing carriage return and line feed (Hexadecimal '0D 0A').

The reject file will contain the description of the error at the top followed by the contents of the file. The reject file can be identified based on the file name prefix REJ. File will be named REJ_NAIC_DatetimeStamp.pgp (e.g. REJ_12345_20190806121501.pgp).

4. **Row Error File:** Row error files are generated when the overall file format sent by the insurance company is okay but some of the rows have errors including:
 - a. Mandatory fields missing.
 - b. Invalid field formats or values.

The row error file will contain only the records that are in error. The remaining records sent with the original file will be processed by NevadaIVS and will not appear in the file. Each error record will have the original row sent by the insurance company followed by a 3 digit Error Code. The format of the Error Code will be E followed by the Field ID of the invalid/missing field. For example, the Error Code for a row with an invalid NAIC number will be "E02". A complete list of Error Codes is provided in Appendix D.

The Row Error file can be identified based on the file name prefix ERR. File will be named *ERR_NAIC_DatetimeStamp* (e.g. ERR_12345_20190806121501.pgp).

5. **VIN No-Match File:** The VIN No-Match files are generated if any of the VINs submitted by the insurance company do not match VINs of vehicles registered in Nevada. The VIN No-Match file will include all the records where the VIN did not match. Each record will have the original row sent by the insurance company followed by "E05", the 3 digit Error Code indicating VIN mismatch. VIN No-Match files are sent to insurance companies for informational purposes and insurance companies are not required to take action based on these files.

The VIN No-Match file can be identified based on the file name prefix VIN. File will be named *VIN_NAIC_DatetimeStamp* (e.g. VIN_12345_20190806121501.pgp).

5. BOB Reporting By Smaller Insurance Companies

Smaller insurance companies insuring five hundred (500) or less vehicles in Nevada are not required to host insurance verification web services and report BOB files via FTP. If the smaller insurance companies are not reporting BOB files by FTP, these companies shall perform a one-time entry of all policies via the NevadaIVS website. After the initial entry, these insurance companies will only be required to update their policies on the NevadaIVS website whenever a policy is added, modified or cancelled/expired.

6. Registration Process

Insurance companies must register on the NevadaIVS website before testing with NevadaIVS. The NevadaIVS website can be accessed at <https://www.NevadaIVS.com>. Cookies should be enabled for the website to properly function after the user has logged in. The NevadaIVS website is used for user registration, account management, reporting, user management, and providing help to insurance companies.

6.1 Insurance Company Registration

To register, go to the NevadaIVS website home page and click on the "Register" link in the menu. Registration is only available to insurance companies that are licensed with the Division of Insurance (DOI) in Nevada. Please follow the instructions below:

- Fill in all the insurance company information and functional contact details.
- Fill in the technical contact details.

- Fill in the compliance contact details. The compliance contact is used to verify insurance by the NevadaIVS Help Desk.
- Provide the password in the Web Login Section.
- Provide a secret question and answer which will be used with the Forgot Password functionality.

After the insurance company submits the registration request, the web account is created and the NevadaIVS team will review and verify it. If the registration requirements are not met, the contact information submitted during registration will be used to notify the registrant and collect any missing/incorrect information. Once verification is complete, the insurance company will be contacted by a NevadaIVS representative to start the testing process.

6.2 Accessing Help

The NevadaIVS website help function is available to users at all times and does not require the user to log in to the website. In order to get help, click on the “Help” link from the menu on any screen. The following information is available through the help function:

- Users can download the latest version of the NevadaIVS Implementation Guide that provides detailed information on interacting with NevadaIVS.
- A Frequently Asked Questions section will be populated based on queries that the NevadaIVS Help Desk receives most often.
- If these sources listed above are not sufficient, click on the “Contact” link to write an email to the NevadaIVS Help Desk.

The NevadaIVS Help Desk can be contacted directly at support@NevadaIVS.com

6.3 Login for Registered and Approved Insurance Company Users

The insurance company must be registered with the NevadaIVS website and the account must be activated before a user can login. To login, enter the user name and password on the NevadaIVS website home page and then click the Login button.

6.4 Insurance Company Profile Management

Once logged in, the User can click on the Account Information link to access the company profile information. The User can change the address, contact, and password information.

6.5 Insurance Company Reports

This section will provide reports that will allow the insurance companies to determine the processing status of the files that were submitted.

7. Support

Insurance companies with questions about NevadaIVS or needing any clarification about information provided in this guide should send an email to support@NevadaIVS.com.

Appendix A: Sample Verification Request and Response Messages

Please Note: The sample request and response messages included in this guide are for illustrative purposes and is based on the IICMVA Web Service WSDL Version Java 1.1 (00200809).

Appendix C: Vehicle Types to be Reported

Vehicle Type	Required to be Reported to NevadaIVS
Passenger	Yes
Rugged Terrain	Yes (Except for Off Highway Vehicles)
Van	Yes
Truck	Yes
Bus	Yes
Trailer	No
Motor Home	Yes
Mobile Home	No
Manufactured Dwelling	No
Boat	No
Motorcycle	Yes
Quadricycle	Yes (Except for Off Highway Vehicles)
Snowmobile	No
Special Mobile	No
Truck Camper	No
Golf Cart	Yes

Notes:

- Vehicles registered through the International Registration Plan (IRP/Motor Carrier Division) are not required to be reported.
- If unsure about the reporting requirement for any vehicle, insurance companies can include them in the Book of Business file.

Appendix D: Error Codes in BOB Row Error Files

Error Code	Field Id	Field Name
E01	1	POLICY TYPE
E02	2	NAIC
E03	3	POLICY NUMBER
E04	4	EFFECTIVE DATE
E05	5	VIN
E06	6	LAST NAME or ORGANIZATION
E07	7	PREFIX NAME ABBR
E08	8	MIDDLE NAME
E09	9	FIRST NAME
E10	10	SUFFIX NAME
E11	11	FEIN
E12	12	ADDRESS
E13	13	CITY
E14	14	STATE
E15	15	ZIP
E16	16	COMMERCIAL INDICATOR
E17	17	COMPREHENSIVE INDICATOR

Appendix E: Definitions

Book of Business (BOB): File that includes specified policy, vehicle, and customer information for all active policies with minimum liability coverage or comprehensive-only coverage.

Decryption Error (DE) File: This file will be generated if a PGP decryption error occurs. Decryption errors can happen for the following reasons: the file sent by insurance company was not encrypted, the file sent by insurance company was improperly encrypted, or the file sent by insurance company was encrypted using the wrong PGP key.

FTP: File Transfer Protocol - standard network protocol used to transfer computer files from one host to another host over a TCP-based network.

NevadaIVS: Nevada Insurance Verification System – the new insurance reporting system covered by this Guide.

IICMVA: Insurance Industry Committee on Motor Vehicle Administration.

NAIC Number: The Number issued by the National Association of Insurance Commissioners to licensed and affiliated insurance companies across the U.S.

NV LIVE: NV LIVE is the Insurance Verification Team with the Nevada DMV. The legacy insurance reporting system run by DMV-NV LIVE will be replaced by NevadaIVS as part of DMV transformation effort.

DMV: Nevada Department of Motor Vehicles

Non Vehicle Specific Policy: A policy where VIN information is not maintained. However, if the insurance company does maintain the VIN, the filing must be reported on a vehicle-by-vehicle basis.

OK file: If there are no errors in the BOB file submitted by the insurance company, an OK file will be generated.

Reject (REJ) File: This file will be generated if NevadaIVS cannot read the file or if the file is improperly formatted and the whole file is being rejected.

Row Error File: Row error files are generated when the overall BOB file format sent by the insurance company is okay but some of the rows have errors including mandatory fields missing and invalid field formats.

VIN Broadcasting: If the VIN in the verification request message matches an insured vehicle but the policy number in the request does not match the insurance policy number, then the insurance company's web service should be able to indicate that the vehicle is covered. This is known as "VIN Broadcasting" or "Unknown Carrier Request".

VIN No-Match File: The VIN No-Match files are generated if any of the VINs submitted by the insurance company in the BOB files do not match VINs of vehicles registered in Nevada.
